Project 2 | Part 2

Student Information:

- Name: Brahian Maidana
- Section: Tue/Thur
- Email: bdmaidana@madisoncollege.edu

Planning List

Input Variables

- Fahrenheit temperature (number)

Output Variables

- Celsius temperature (number)

Process Checklist

1. Prompt the user to enter a Fahrenheit temperature.
2. Convert the entered Fahrenheit temperature to Celsius using the formula: $\text{Celsius temperature} = (\text{Fahrenheit temperature} - 32) * (5 / 9)$.
3. Display the entered Fahrenheit temperature and the calculated Celsius temperature.

Sample Output

```
Entered Fahrenheit Temperature: 77
Calculated Celsius Temperature: 25
```

Your Output

```
Fahrenheit Temperature: 80
Celsius Temperature: 27°C
```
